

# Values

## Colors

KeeTheme supports the 3 main color formats

- **RGB** used like: `Item = (0,0,255)`. Equivalent to the color blue.
- **HEX** used like: `Item = #00FF00`. Equivalent to the color green.
- **Shortened Hex** used like: `Item = #FF00`. Equivalent to the color red.

## Enums

The following items will **only** work if left empty of supplied with one of their subsequent enums.

### <BorderStyle>

- `BorderStyle` = Uses the default value which is either it's parent's value or the `none` value.
- `BorderStyle = None` Displays no border
- `BorderStyle = FixedSingle` Displays a thin line on the border
- `BorderStyle = FixedID` Displays a thicker line on the border

### <FlatStyle>

Unknown at the moment, perhaps the Dev would fill this out

- `FlatStyle =`
- `FlatStyle = Flat`
- `FlatStyle = Popup`
- `FlatStyle = Standard`
- `FlatStyle = System`

### <BackgroundImageAlignment>

- `BackgroundImageAlignment =` Uses the default value `TopLeft`
- `BackgroundImageAlignment = TopLeft` Aligns the image so it positioned in the **Top Left** corner of the area it's in.
- `BackgroundImageAlignment = TopCenter` Aligns the image so it positioned in the **Middle** of the **Top** area it's in.
- `BackgroundImageAlignment = TopRight` Aligns the image so it positioned in the **Top Right** corner of the area it's in.
- `BackgroundImageAlignment = MiddleLeft` Aligns the image so it positioned in the **Middle** of the **Left** area it's in.
- `BackgroundImageAlignment = MiddleCenter` Aligns the image so it positioned in the **Middle** area it's in.
- `BackgroundImageAlignment = MiddleRight` Aligns the image so it positioned in the **Middle** of the **Right** area it's in.
- `BackgroundImageAlignment = BottomLeft` Aligns the image so it positioned in the **Bottom Left** corner of the area it's in.
- `BackgroundImageAlignment = BottomCenter` Aligns the image so it positioned in the **Middle** of the **Bottom** area it's in.
- `BackgroundImageAlignment = BottomRight` Aligns the image so it positioned in the **Bottom Right** corner of the area it's in.

## Special Cases

- `BackgroundImage: <filename>` `<filename>` is replaced by the path to your image.
- **Example:** If you had an image named `icon.png` located inside your `/res/Pass Password Safe/plugins/` folder, you'd use `BackgroundImage: icon.png`
- `Name = <string>` `<string>` is replaced with a row of characters on the same line.
- **Example:**

## Variables

KeeTheme uses variables to store colors in the `[Palette]` section. Any items stored here can be used as a value anywhere else.

**Example:** If you would like to name your theme `My Super Awesome Theme` you would use `Name = My Super Awesome Theme`

```
[Palette]
SomeVariableName = (0,200,10)
MyNameHere = #FF00FF

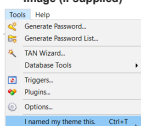

[Control]
BackColor = MyNameHere
ForeColor = SomeVariableName
```

## Usage

Now lets go into the details of each item one at a time.

**Note:** Any images displayed here will be taken of `KeyPass un-themed`.

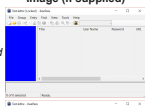

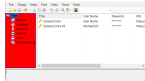

### [KeeTheme]

Usage	Description	Image (if supplied)
<code>Name = &lt;string&gt;</code>	This names your theme so when you click 'Tools' in the top the name of your theme is displayed in the list	

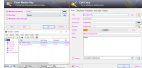

### [Palette]

Your variables go here. None are required for the plugin to work properly.

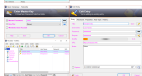

### [Other]

Usage	Description	Image (if supplied)
<code>ControlNormalColor = &lt;color&gt;</code>	The default color of the groups list. <i>When unlocked</i>	
<code>ControlDisabledColor = &lt;color&gt;</code>	The default color of the groups list. <i>When locked</i>	

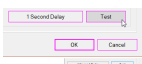

### [Control]

Usage	Description	Image (if supplied)
<code>BackColor = &lt;color&gt;</code>	The default color of the majority of backgrounds.	
<code>ForeColor = &lt;color&gt;</code>	The default color of the majority of text.	

### [Form]

Usage	Description	Image (if supplied)
<code>BackColor = &lt;color&gt;</code>	The default color of the majority of backgrounds that's included in a form.	
<code>ForeColor = &lt;color&gt;</code>	The default color of the majority of text that's included in a form.	

### [Button]

Usage	Description	Image (if supplied)
<code>BackColor = &lt;color&gt;</code>	Un-Used	
<code>ForeColor = &lt;color&gt;</code>	Un-Used	
<code>BorderColor = &lt;color&gt;</code>	The border color of buttons if their <code>FlatStyle</code> is set to <code>Flat</code> . Otherwise Un-Used	
<code>FlatStyle = &lt;FlatStyle&gt;</code>	The style of buttons. <b>Note:</b> Styles may appear different depending on your OS.	<p>Default: </p> <p>Flat: </p> <p>Popup: </p>
